		displacement also remains the same.
6	**C**	For vertical equilibrium, $F_y = mg$ For horizontal motion, $F_x = ma = 0.50\ mg$ $F = \sqrt{F_x^2 + F_y^2}$ $= \sqrt{(0.50mg)^2 + (mg)^2}$ $= 1.1mg$
7	**B**	$a_c = r\omega^2 = r(\frac{2\pi}{T})^2$
