Qn	Suggested Answer
1	
(a)	Base SI Units of P = kg m^{-1} s^{-2}
	Units of $\eta = \dfrac{(\text{units of } P)(\text{units of } r)^4}{(\text{units of } l)(\text{units of } \frac{V}{t})}$ $= \dfrac{(\text{kg m}^{-1}\ \text{s}^{-2})(\text{m})^4}{(\text{m})(\text{m}^3\ \text{s}^{-1})}$
	= kg m^{-1} s^{-1}
(b)(i)	$\pm\dfrac{\Delta\eta}{\eta}x100\% = \pm(\dfrac{\Delta P}{P} + 4(\dfrac{\Delta r}{r}) + \dfrac{\Delta l}{l} + \dfrac{\Delta(\frac{V}{t})}{(\frac{V}{t})})x100\%$
	$= \pm(5\% + 4(0.5\%) + 2\% + 3\%)$
	$= \pm 12\%$
(b)(ii)	$\pm\ \Delta\eta = 0.12 \times 1.137 \times 10^{-3} = 0.136 \times 10^{-3}$ kg m^{-1} s^{-1} Ans: $(1.1 \pm 0.1) \times 10^{-3}$ kg m^{-1} s^{-1}
