	$\Rightarrow f_2 = \frac{3}{4}(512) = \underline{384\ Hz}$
16	**B** For the 3rd order beam through a diffraction grating, $d\sin 45° = 3\lambda$ --- (1) For the highest order, max θ = 90°, $d\sin 90° = n\lambda$ --- (2) Solving both equations simultaneously, $n = 4.24 \Rightarrow$ the highest order is 4.
17	**C** Total charge passing through = current x time
