	Number of neutrons in nucleus $Q = A - (Z + 1) = A - Z - 1$
30	**B** Let the initial count rate due to source only be C. After 2 half-lives, the count rate will drop by $\frac{3}{4}C$. Hence, $\frac{3}{4}C = 324 - 108$ $C = 288$ Background radiation = 324 – 288 = 36
