	Distance = 126 × 10.1 = 1273 m
4	**D** A: Considering both blocks as one system, the force exerted on the ground in (1) is equal to that in (2). B: The force by wooden block on the copper block in (1) is the same as that by the copper block on the wooden block in ~~(2)~~ (1) due to Newton's Third Law. C: In (3), the normal force exerted by the wooden block on the copper block must be greater than the copper block's weight to accelerate it upwards.
