		The direction g is from higher potential to lower potential, i.e. P to Q
11	**B**	Average K.E $= \frac{3}{2}kT = \frac{3}{2}(1.38 \times 10^{-23})(27 + 273.15) = 6.2 \times 10^{-21}$ J
12	**D**	At steady state, pressure in both flasks are the same. Applying ideal gas law
