14	**D**	For large amplitude vibration (resonance), natural frequency must be equal to driving frequency (in this case it is the frequency of hitting the bumps). $T = \frac{1}{2.0} = 0.50$ s $d = vt$ $5.0 = v\,(0.50)$ $v = 10$ m s^{-1}
15	**A**	As damping increases the frequency of a oscillating decreases.
