		$r = 20\ \Omega$
23	**D**	For circular motion inside a uniform magnetic field, Magnetic force provides the centripetal force, $Bqv = \frac{mv^2}{r} \Rightarrow Bq = \frac{m\left(\frac{2\pi r}{T}\right)}{r}$ $\therefore T = \frac{2\pi m}{Bq}$, independent of the velocity of the particle.
24	**C**	$F_E = ma$
