		be a resultant clockwise moment.
6	**A**	Constant v means net F = 0 Force by engine + mg sin(6.0°) = resistive force F = 2000 – 1500 (9.81) sin(6.0°) = 462 N Power output by engine = F v (462)(30) = 14 kW
7	**C**	Output power, $P_o = 0.25P_i = (0.25)(10) = 2.5$ W
