		or $\omega^2 = \lvert gradient \rvert$
13	**C**	P is at the positive max position at t = 0, so cosine function. Phase difference $= 2\pi \times \frac{\Delta x}{\lambda} = 2\pi \frac{0.75\lambda}{\lambda} = 1.5\pi$
14	**C**	$\frac{A_2}{\quad} = \left(\frac{L_2}{\quad}\right)^2 = \left(\frac{16}{\quad}\right)^2 = 64$
