		Length of open pipe $L' = \frac{\lambda}{2} = 4L$
16	**B**	Complete spectrum is considered using the longest wavelength since it lies furthest from the zeroth order max for the same order. $$a \sin\sin\theta = n\lambda$$ $$\frac{0.001}{500} \sin\sin\theta = n \times 600 \times 10^{-9}$$

		$sin\ sin\ \theta\ = 0.3n \leq 1$ $\therefore n \leq 3.33$ Complete spectra on both sides of central maximum = 3 + 3 = 6
17	**A**	Initially, $n_A + n_B = \frac{pV}{R(283)} + \frac{p(8V)}{R(283)} = \frac{9pV}{R(283)}$
