		(common mistake: $V = 4\pi(0.10)^2 = 1 \times 10^{-1}$ m^3 (m^2))
3	A	Since the frictional force is f, when the block just starts to slip, $f = 0.25mg$. $mg \sin\theta - 0.25mg = 0$ $\sin\theta = 0.25$ $\theta = 14°$
4	B	$\angle OBA = 60^o$ for a hexagon. $R \times OD = 200 \times OB \sin 60°$
