2	**(a)**	either: use conservation of energy $\frac{1}{2} mv^2 = m\,(9.81)\,(0.86)$ or: use equation of motion $v^2 = 0^2 + 2\,(9.81)\,(0.86)$	M1
		leading to 4.1 m s^{-1}	A0
	(b)	4.1 m s^{-1}	B1
	(c)	velocity parallel to slope remains constant after collision	M1
		velocity perpendicular to slope retains the same magnitude after collision (since elastic)	M1
		so, velocity before and after collision is 30° to the normal of the slope	A1
	(d)	time of flight = 0.6164 s (using equation of motion)	C1
		Horizontal distance between P and R = 2.189 m	C1
		QR = $2.189 - 1.2 \cos 30^\circ = 1.149$ m = 1.1 m or 1.15 m	A1
