$= 5.2113 \approx 5.2$

28 **B** Diameter of an atom is $\sim 10^{-10}$ m, we approximate $\Delta x \approx 10^{-10}$ m

Using Heisenberg's uncertainty principle,

$\Delta x \Delta p \geq h$

$\Delta p \sim \frac{h}{\Delta x} \approx \frac{10^{-34}}{10^{-10}} = 10^{-24}$

29 **C** Alpha particles are stopped by paper
