19	**B**	At M, the electric potential energy of the particle will be $U = \frac{1}{4\pi\varepsilon_0}\left(\frac{2Qq}{d} + \frac{-Qq}{d}\right) = \frac{1}{4\pi\varepsilon_0}\frac{Qq}{d}$ From conservation of energy, Gain in EPE = Loss in KE $\frac{1}{2}mu^2 - \frac{1}{2}mv^2 = \frac{1}{4\pi\varepsilon_0}\frac{Qq}{d}$ $v^2 = u^2 - \frac{1}{2\pi\varepsilon_0}\frac{Qq}{md}$ $v = \sqrt{u^2 - \frac{1}{2\pi\varepsilon_0}\frac{Qq}{md}}$
