		$P_{initial} \quad KV_{initial} \quad (V_{initial}) \quad (\sqrt{2})$
6	**C**	For vertical motion: $H = \frac{1}{2}(v \sin\alpha + 0)t$ In same time, horizontal motion: $\frac{R}{2} = v \cos\alpha \ t$ $\frac{\frac{R}{2}}{H} = \frac{v \cos\alpha \ t}{\frac{1}{2} v \sin\alpha t}$ $R = 4H \frac{\cos\alpha}{\sin\alpha}$
7	**C**	For an object dropped from a high building and air resistance being significant
