15 Ans: C (2013/I/17)

pV = NkT

p V = Nk(250) **initially**

[2p] V = N'k(1250) **finally**

Fraction that **escape** = **(N – N') / N**

$$= \left(\frac{pV}{250k} - \frac{2pV}{1250k}\right) \times \frac{250k}{pV} = \frac{3pV}{1250k} \times \frac{250\,k}{pV} = 0.6$$
