**1 Ans: C**

Let [ ] denote unit of.

$[v] = [T^p \mu^q]$

$m\ s^{-1} = (kg\ m\ s^{-2})^p\ (kg\ m^{-1})^q$

Comparing unit of s on both sides, $-1 = -2p$

Comparing unit of kg on both sides, $0 = p + q$

Hence $p = ½$, $q = -½$

**2 Ans: A**
