

4a	Electric potential at a point is the <u>work done per unit charge</u> to bring a <u>small positive charge</u> from infinity to that point.	B1
4bi	 B1: shape and asymptotes B1: r – intercept is closer to P	B1 B1
4bii	 B1: direction of field lines B1: more lines from -40μC B1: Shape (asymmetry in pattern)	B1 B1 B1
4biii	Electric potential energy = $\frac{1}{4\pi\epsilon_0} \frac{Q_P Q_Q}{r}$ $= (9 \times 10^9) \frac{(20 \times 10^{-6})(-40 \times 10^{-6})}{30 \times 10^{-3}}$ $= -240 J$	C1 A1
