

4 A box resting on a table has two vertical and two horizontal forces acting on it as shown in the diagram below. The box is in equilibrium.

Which statement about the forces is **not** correct?

- | | |
|----------|--|
| A | The sideways left force is equal and opposite to the sideways right force on the box. |
| B | The resultant of all the forces is zero. |
| C | The torque provided by the vertical forces is equal to the torque provided by the horizontal forces. |
| D | The normal reactional force from the table is equal and opposite to the weight of the box. |

Answer: C

The torque provided by the vertical forces is not only equal to the torque provided by the horizontal forces but also in opposite directions

5 A vehicle starts from rest and a net force acts on it. The figure below shows how the net force
