

satellite.

- 12 D** If both gases are at the same temperature, their average microscopic kinetic energy and root-mean-square speed will be the same.

Since the volume of container B is larger than that of A, the gas pressure and density will be smaller in B.

- 13 B** Net work done on the gas = [area enclosed] = [area of circle] = $\pi r^2 = \pi (2.14 \times 10^{-2} \text{ m})^2 = 2.88 \times 10^{-3} \text{ J}$
