

		$Mc(20+T) = 0.100c_w (40 - T)$
15	D	A: Internal energy of an ideal gas is made of sum of random distribution of KE. B: With isothermal change, there is no change in temperature (hence KE), therefore no change in internal energy. C: When an ideal gas is compressed, work is gone on the system. D: The First Law of Thermodynamics states that the <u>increase</u> in internal energy of a system is the sum of heat supplied to the system and the work done on the system.
16	C	Maximum force = 8 N, amplitude = 0.5m
