

		At 4.5 m, $I = \frac{P}{4\pi r^2} = \frac{P}{4\pi 4.5^2} = 0.24 W m^{-2}$
	18	C For stationary wave, a displacement node corresponds to a pressure antinode hence the pressure value will fluctuate from high to low.
	19	D $d \sin 45^\circ = 2\lambda$
