

		$Bqv = qE \rightarrow E = Bv = (1.5)(2 \times 10^7) = 3 \times 10^7 \text{ N C}^{-1}$
	22	$E = W/Q = (2500+1500) / 2000 = 2 \text{ V}$
	23	$\frac{1}{2}mv^2 = \frac{1}{2}mv_0^2 + eV \Rightarrow \frac{1}{2}m(v^2 - v_0^2) = eV$
