

27 (C)

energy of electron $E = eV$

energy of electron converted to a single photon $E = hf = \frac{hc}{\lambda_0} \Rightarrow \lambda_0 = \frac{hc}{eV} \Rightarrow \lambda_0 \propto \frac{1}{V}$

$$\text{ratio} = \frac{(\lambda_0)_{6 \text{ kV}}}{(\lambda_0)_{8 \text{ kV}}} = \frac{8}{6} = 1.3$$
