

2 (D)

$$3\% \text{ of } 327.66 = 9.8... = 10 \text{ m s}^{-1}$$

3 (C)

[Method 1]

$$\text{ratio} = 3 \text{ parts} / 1 \text{ part} = 3$$

[Method 2]

$$\text{Between 0 and 8 s, distance travelled} = 0 \times 8 + \frac{1}{2}a(8)^2 = 32a \text{ and speed} = 0 + a(8) = 8a$$

$$\text{Between 8 s and 16 s, distance travelled} = 8a \times 8 + \frac{1}{2}a(8)^2 = 96a$$

$$\text{Ratio} = 96a/32a = 3$$
