

15	D	Using $Q = mc\Delta\theta$ heat gained by metal = heat lost by liquid $mc(\theta_f - 20) = (3m)(2.5c)(100 - \theta_f)$ $\theta_f - 20 = 750 - 7.5\theta_f$ $8.5\theta_f = 750 + 20$ $\theta_f = 90.59 = 91\text{ }^{\circ}\text{C}$
