

		$d = 5.66 \text{ m}$
23.	B	Current-carrying conductors will attract when currents are in same direction, but repel when in opposite directions. Hence, PS will attract each other while PQ and PR will repel each other, since PR are further apart, the repelling force will be weaker than the force between PS and PQ,
24.	A	There is maximum cutting of the magnetic field when the coil is horizontal
