

		PS and PQ,
24.	A	There is maximum cutting of the magnetic field when the coil is horizontal therefore the induced e.m.f. will be the greatest. OR Since $E = -\frac{dN\Phi}{dt}$, the graph of magnetic flux linkage and that of induced e.m.f. will be out of phase by $\pi/2$, thus when magnetic flux linkage is zero, induced e.m.f. will be maximum.

25	A	$dN/d\Phi$
