

		the decreasing flux into the coil. Hence by right hand grip rule, the current will be flowing clockwise in order to produce flux going into the page.
26.	A	Using turn ratio, voltage across the secondary coil is $120 \times \frac{10}{500} = 2.4 \text{ V}$ So current in secondary coil is $\frac{2.4}{15} = 0.16 \text{ A}$. For ideal transformer, $120 \times I_p = 0.16 \times 2.4$ so $I_p = 0.0032 \text{ A}$
27.	C	Diffraction is a phenomenon exhibited by waves. Electron undergoing
