

25	D	$B = \mu_0 n I$ As the number of turns is halved, solenoid length is also halved, hence n does not change. As $I = V/R$ where $R = \rho L/A$, since L is halved, R will be halved and I will be twice as before. Hence B_{centre} will be twice.
26	B	By Faraday's Law, the e.m.f. induced in the coil of wire rotating in a magnetic field
