

- 13 A fixed mass of ideal gas undergoes changes in pressure p and volume V starting with process A, as shown.

Which statement about the processes is **not** necessarily true?

- A Temperature of the gas is doubled in process A.
- B Work done by the gas in process A is $4P_0V_0$.
- C Heat is removed from the system in process B.
- D There is no heat exchange in process C.

14 In an ideal gas at $200\text{ }^{\circ}\text{C}$, the molecules are travelling at a root-mean-square speed v
