

- 20** A -5.0 C point charge is initially stationary at a point P in a uniform electric field of field strength 4.0 V m^{-1} .

It is then moved within the field 2.0 m parallel to the field and 3.5 m perpendicular to the field to a point Q as shown.

What is the work done against the electric field?

- A** -40 J
- B** 40 J
- C** -70 J
- D** 70 J

21 An electron of charge e and mass m enters through a hole into a space between two
