

5. Ans: B

At equilibrium,
 $CW = ACW$

$$T_P X = T_Q X$$

$$T_P = T_Q$$

$$T_P = T_Q$$

$$W_P - U_P = W_Q - U_Q$$

$$W_P - \rho_X g V = W_Q - \rho_Y g V$$

Since $\rho_X > \rho_Y$, $U_P > U_Q$ since both have the same volume.

Therefore, $W_P > W_Q$, $m_P > m_Q$.
