

17 Which statement about an electric field is correct?

- A** When a positive point charge is brought from infinity into the field of a positively charged sphere, its potential energy decreases.
- B** The direction of an electric field at a point shows the direction in which any charge would move if placed at that point.
- C** When a positive charge moves along the direction of an electric field, its potential energy decreases.
- D** The electric field strength is always proportional to the electrical potential.

18 A network of resistors each of resistance $10\ \Omega$ are shown
