

- 21 Two long straight vertical wires run parallel to each other, carrying currents in opposite directions as shown. Wire N is in a region where an additional external magnetic field, B , is directed into the plane of the paper.

Which statement is correct?

- A The net force on wire N is zero.
- B The net force on wire N acts to the right.
- C The net force on wire N acts out of the plane of the paper.
- D The net force on wire N acts either to the left or right depending on the magnitude of the currents and the strength of the external magnetic field.

22 A circular coil has resistance R and area A . The coil is placed in a uniform magnetic field
