

- 4 A circular ring of weight 20 N is suspended by a string attached to a point on its rim. The magnitude of the tension in the string is T . The ring is acted on by two horizontal forces, P and Q , forming a couple. P and Q are each of magnitude 10 N and acts tangentially on the rim of the ring as shown.

Which of the diagram shows the ring in equilibrium?

- 5 The motor of a small boat has a propeller of diameter 0.200 m. When the boat is starting
