

		answer
3(a)	Acceleration is a rate of change of velocity. Since the <u>direction of moving bob is changing</u>, hence there is a <u>change in velocity of the bob</u> and hence there is acceleration.	[1] [1]
3(b)	Since the weight remain stationary to the tube, there is no net force acting on the weight, i.e. $T = W_{\text{weight}}$ $= (0.400)(9.81)$ $= 3.924 \text{ N}$ 	[1] explain $T =$ weight of brass weight
