13 Unpolarised light of intensity I_o is incident on a polariser. The transmitted light is then incident on a second polariser whose transmission axis is at 60° to the first.

What is the intensity in terms of I_o, of the light transmitted through the second polariser.

A $\frac{1}{8}I_o$ **B** $\frac{1}{4}I_o$ **C** $\frac{3}{8}I_o$ **D** $\frac{1}{2}I_o$
