15 Monochromatic light is incident normally on a diffraction grating. First and second order images are observed at angles of diffraction θ_1 and θ_2 respectively.

What is the relation between the angles of diffraction and between the intensities of light in the two orders?

	angles of diffraction	**intensities**
A	$\theta_2 = 2\theta_1$	same
B	$\theta_2 = 2\theta_1$	second order dimmer
C	$\theta_2 > 2\theta_1$	same
D	$\theta_2 > 2\theta_1$	second order dimmer
