24 A wire of length 0.050 m is placed at an angle of 70° to a magnetic field of flux density 3.4×10^{-2} T, as shown.

The current through the wire is 3.7 A.

What is the force on the wire and the direction in which the force acts?

	force on the wire / N	**direction in which the force acts**
A	2.2×10^{-3}	into the paper
B	2.2×10^{-3}	out of the paper
C	5.9×10^{-3}	into the paper
D	5.9×10^{-3}	out of the paper
