26 A circular coil of 5 turns and radius 6.0 cm lies in the plane of the paper. A magnetic field acts perpendicularly into the paper as shown.

The magnetic flux density of the magnetic field changes in magnitude from 0.75 T to 0.18 T in 0.42 s.

What is the average e.m.f. induced in the coil?

A 15 mV **B** 72 mV **C** 77 mV **D** 96 mV
