10 Two isolated point masses, P of mass m and Q of mass $2m$, are separated by a distance $3d$. X is a point a distance d from P and $2d$ from Q.

What is the net gravitational field strength and the net gravitational potential at X?

	net gravitational field strength at X	net gravitational potential at X
A	0	$-\frac{Gm}{d}$
B	$\frac{Gm}{d^2}$	$-2\frac{Gm}{d}$
C	0	$-3\frac{Gm}{d}$
D	$\frac{Gm}{2d^2}$	$-2\frac{Gm}{d}$
