27 An electron can have both wave and particle properties.

Which equation relates the wavelength of an electron to one of its particle properties?

A $\text{wavelength} \times \text{momentum} = \text{constant}$

B $\dfrac{\text{wavelength}}{\text{momentum}} = \text{constant}$

C $\text{wavelength} \times \text{kinetic energy} = \text{constant}$

D $\dfrac{\text{wavelength}}{\text{kinetic energy}} = \text{constant}$
