1 Measurements a, b and c are taken to determine the quantity x which is given by

$$x = \frac{ab^2}{c}.$$

The total uncertainty of x is calculated to be 12 %.

Which individual percentage uncertainties of a, b and c when combined give this total of 12 %?

	a / %	b / %	c / %
A	4	2	4
B	2	8	2
C	3	2	2
D	6	2	4
