17 A Hubble telescope is used to observe two distant stars. The aperture diameter of the Hubble telescope is 2.4 m and visible light is used in the telescope. The two stars are observed to be just resolved.

Which is the best estimate for the angular separation of the two stars?

A 1×10^{-8} rad **B** 2×10^{-7} rad **C** 1×10^{-5} rad **D** 2×10^{-5} rad
