19 A container contains a volume of 120 cm^3 of water at 60 °C.

30 cm^3 of water at temperature of 20 °C is added to the container.

Assume that no heat escapes from the container and the density of water remains constant.

What is the temperature of the combined volume of water when thermal equilibrium is reached?

A 26 °C **B** 28 °C **C** 45 °C **D** 52 °C
