

		$v = r\omega = 42297523 \times \frac{2\pi}{24 \times 60 \times 60} \approx 3080 \text{ m s}^{-1}$
11	C	Temperature at equilibrium is 273.15 K Heat lost by copper= Heat gained by ice $m_{Cu}c\Delta T = m_{ice}c\Delta\theta + m_{water}L$ $5.0 \times 390 \times \Delta T = 3.0 \times 2100 \times (273.15 - 250) + 0.8 \times 340000$ $\Delta T = 214.3 \text{ K}$ $T = 273.15 + 214.3 \approx 490\text{K}$

Qn	Ans	Suggested Solution
12	C	2
