

12 The temperature of one mole of oxygen gas is the same as that of one mole of nitrogen gas.

Which statement is correct?

- A** The gas molecules have the same root mean square speed.
- B** The gas molecules have different mean translational kinetic energies.
- C** The total translational kinetic energy of both gases are the same.
- D** The values of the product of volume and pressure of both gases are different.

13 The oscillations of a mass suspended on a spring are simple harmonic. The variation with
