

		hence particle 3 is in phase with P.
17	D	$y = \frac{\lambda D}{a}$ $\frac{(600 \times 10^{-9})(1.0)}{a} = \frac{(450 \times 10^{-9})(D)}{a}$ $D = 1.3 \text{ m}$
18	B	Removing electrons from Q will result in a larger positive charge which will cause a larger
